DETAILED ACTION

1. Please disregard Office Action mailed on 3/4/09 in view of a modified Action below.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 6 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 6 and 7, the term "the second filter coefficient" lacks proper antecedent basis.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claim 12 is rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. While the claims recite a series of steps or acts to be performed, a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing ("[t]he Supreme Court has recognized only two instances in which such a method may qualify as a section 101 process: when the process 'either [1] was tied to a particular apparatus or [2] operated

Application/Control Number: 10/552,056

Art Unit: 2622

to change materials to a 'different state or thing."" See PTO Supp. Br. 4 (quoting *Flook*, 437 U.S. at 588 n.9). In *Diehr*, the Supreme Court confirmed that a process claim reciting an algorithm could state statutory subject matter if it: (1) is tied to a machine or (2) creates or involves a composition of matter or manufacture. 12 450 U.S. at 184." *In re Comiskey*, 84 USPQ2d 1670 (Fed. Cir. 2007). The instant claims neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. In order for a process to be "tied" to another statutory category, the structure of another statutory category should be positively recited in a step or steps significant to the basic inventive concept, and NOT just in association with statements of intended use or purpose, insignificant pre or post solution activity, or implicitly.

Page 3

6. Claim 13 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed computer program product is considered a non-statutory subject matter because a computer program product can be just a list of computer instructions which has no physical or tangible form. It is well settled that computer software itself is not a statutory subject matter. However, if a claim claims a computer readable medium which is employed to store a computer program incorporating a processor or computer to read out and execute the program, then it becomes statutory.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1 and 6-13 are rejected under 35 U.S.C. 102(b) as being anticipated by the prior art admission as described in reference to Figures 1A-1C.

Regarding claim 1, Figures 1A and 1C discloses an image conversion unit showing a coefficient determining means (106), and an adaptive filtering means (104). Applicant admits that the coefficient determining means 106 generates the filter coefficient of an input pixel based on the least means square value (LMS) of a set of surrounding pixels. In order to generate the LMS of the pixel, a control means is required to manipulate the equations 3-7 as shown in page 7 of the specification. Therefore, the inherently included control means meets the control means as claimed.

Regarding claim 6, the training derived LUT 109 meets the claimed LUT.

Regarding claim 7, see applicant's admission on page 7, lines 5-10.

Regarding claim 8, equation 2 as shown in page 6 limits the interpolated pixel within the minimum and maximum values of the input pixels based on the filter coefficients derived from the LMS values. This clearly meets the clipping unit as claimed.

Regarding claims 9-11, the prior art admission inherently includes input means and display means.

Regarding claims 12 and 13, in addition of above, the conversion unit above is intended to implement by a computer software or computer hardware.

Allowable Subject Matter

9. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Campbell (5,019,904) shows a coefficient generator.

Kondo et al. (6,323,905) shows an adaptive filter.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Lee whose telephone number 571-272-7349. The examiner can normally be reached on Monday through Thursday from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh Tran, can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
